Projects

VIVIPINS (Dynamic Page Builder Platform)

Technologies: Laravel, Inertia, Vue3, MySQL

- Developed a dynamic page-builder system allowing administrators to create reusable content templates.
- Implemented nested blocks, repeaters, dynamic field generation & drag-and-drop functionality
- Built dynamic frontend rendering based on backend-defined templates.

HANDYCASH DIGITAL LOAN (Customer Relationship Management System)

Technologies: Laravel, Inertia, Vue3, MySQL

- Multi-vendor CRM
- Enabled customer assignment and ordering by weekdays.
- Persisted sorting and scheduling data through database integration.
- Improved workflow efficiency through intuitive user interactions.
- Designed automated history tracking for critical business entities.

MAX PURCHASE PRICE CALCULATOR

Technologies: Laravel, Inertia, Vue3, MySQL, Next.js (frontend)

- Developed a multi-tenant mortgage/max purchase price calculator platform.
- Built secure admin modules for managing companies, calculator leads, contact inquiries, user profiles, and password updates.
- Integrated dynamic page layout management, lead tracking, soft deletes, validation, and third-party services such as GoDaddy DNS and GoHighLevel API support.
- Created REST API endpoints to serve company-specific branding, page layout content, calculator data, and contact form submissions.

TRUE FARMERS AGRO

Technologies: Laravel, Inertia, Vue3, MySQL

- Built a full-stack farm management system, created modules for projects, crops, sowing details, fertilizer tracking, spray scheduling, and crop yield management.
- Developed financial workflows for income, expenses, payroll, rented assets, asset purchases, and inventory tracking, with automatic expense and stock updates.

- Created reporting features including dashboard income/expense summaries, payroll reports, payslip generation, and PDF downloads using DomPDF.
- Implemented role-based access control with users, roles, permissions, Laravel Gates, and project-specific authorization.
